

WORK EXPERIENCE

UCLA, Los Angeles, CA

March 2023 – Present

Position: **Data Analyst**

- Designed data collection protocols for UCLA Summer Sessions, overseeing 3-year divisional reporting of 8,500+ international and non-UC student enrollments across 12 departments.
- Analyzed 1.3M+ page views using Python and Excel, transforming data from Microsoft Clarity and Google Analytics into actionable insights that reduced bounce rates by 18% through A/B testing.
- Created Tableau visualizations and reports communicating enrollment trends to stakeholders, delivering policy-relevant recommendations that informed 5 curriculum decisions and increased enrollment conversions by 23%.
- Collaborated with cross-functional teams to develop data-driven scheduling strategies, improving classroom utilization by 31% and generating \$1.4M in additional revenue.

Westwood Greenway, Los Angeles, CA

January 2022 – July 2022

Position: **Associate Project Manager Intern**

- Spearheaded community survey research protocol to assess stakeholder perspectives on greenway development, achieving 90% approval rate through strategic resident and business engagement.
- Managed cost-benefit analyses using SQL and statistical methods, creating interactive Tableau dashboards to communicate findings to city planners and community stakeholders, resulting in 14% cost reduction through evidence-based budget recommendations.
- Collaborated with interdisciplinary teams to translate quantitative data and community input into actionable policy recommendations for urban development planning.

PROJECTS (<https://ememercy21.github.io/>)

Navigating the Secondary Market in the Ticketing Industry

- Implemented comprehensive data collection and cleaning protocols for 66,000+ ticket listings, conducting exploratory data analysis in R and C to identify pricing patterns, temporal trends, and market segmentation across 25 North American cities.
- Conducted advanced statistical analyses using LASSO regression modeling to evaluate ticket resale value and predict fair market pricing, achieving 80% accuracy in identifying underpriced listings.
- Developed reproducible data analysis pipelines and custom algorithms for seat quality scoring, ensuring transparency and replicability of research methods.
- Prepared findings for potential dissemination, creating clear data visualizations and documentation to communicate complex pricing dynamics to both technical and non-technical audiences.

Brain Drain: Identifying U.S. Regions at Risk for Future Capital Flight Using Social Capital and Mobility Outcomes

- Designed and implemented comprehensive data collection and integration protocols, merging multiple county-level datasets from the U.S. Census Bureau and Harvard's Opportunity Insights using standardized FIPS codes to ensure data accuracy and completeness across 3,000+ U.S. counties.
- Conducted logistic regression and decision tree analyses in R to predict county-level brain drain risk (AUC = 0.91), identifying at-risk regions and translating findings into policy-relevant recommendations.
- Performed extensive exploratory data analysis examining relationships among social capital indicators (economic connectedness, civic engagement, volunteering rates) and intergenerational mobility outcomes, revealing strong positive correlations ($R^2 = 0.69$) between economic connectedness and upward mobility.

EDUCATION

University of California, Los Angeles (UCLA)

September 2024 - Present

Masters of Science in Applied Statistics and Data Science

University of California, Los Angeles (UCLA)

Graduated June 2022

Bachelors of Science in Biology, Minor: African American Studies
